

ToughLON[®]

Material Innovation

Strong
Durable
Flexible
Lightweight
Easy to install
Heat resistant
Easy to handle
Excellent wear
Chemical Resistant
Teflon[®] Advantages
Self-lubricating

ToughLON[®] is the newest generation of materials.

It is the first and only Suction Roll Seal Strip material that is infused with Teflon[®] throughout the entire volume of the material and is almost like using solid Teflon[®] but has the durability of the Polytron[®] line of materials.

The ToughLON[®] is the next advancement in materials technology, and the most significant change in seal strip materials, for more than 30 years. The material has the flexibility needed for installation and during use but has shown a much longer wear life than the graphite materials.
